

WHAT IS CLAIMED IS

1. A fluid filtration device,
comprising:

a. an envelope, said envelope being constructed of a
5 frangible material, said envelope forming a closed interior
chamber;

b. a predetermined charge of volatile scented material,
said scented material being located within said interior chamber
of said envelope; and

10 c. a flexible shield at least partially enclosing said
envelope, said flexible shield being permeable to said volatile
scented material and serving as a container for divided portions
of said envelope, said shield allowing transmission of a force to
break said envelope therewithin.

15 2. The device of claim 1 in which said flexible shield
comprises a layer of polymeric material.

3. The device of claim 2 in which said layer of
polymeric material comprises polyethylene.

20 4. The device of claim 3 in which said envelope
comprises an elongated tube.

5. The device of claim 4 in which said elongated tube
comprises a glass tube.

25 6. The device of claim 1 which further comprises a
first partition, a second partition and means for connecting said
first partition to said second partition to form a chamber, said

envelope positioned within said chamber, at least said first partition being permeable to said volatile scented material.

7. The device of claim 6 in which said flexible shield comprises a layer of polymeric material.

5 8. The device of claim 7 in which said layer of polymeric material comprises polyethylene.

9. The device of claim 8 in which said envelope comprises an elongated tube.

10. The device of claim 9 in which said elongated tube comprises a glass tube.
